DD&T — WEEKLY REPORT

Digital, Data & Technology

Name: Carlos Jimenez

Group: Digital ☐ Data ☐ Technology ☒ Creative Pod ☐

Week ending: November 1, 2026

1 · This week in one paragraph

Android work centered on search for Moments (MOB-894): Moment results now have their own thumbnail style, open in the Videos section, and cancel any audio preroll in progress so no ad or previous audio plays over the video. The app version is now 13.7.7 (build 1155).

On Android TV, I added playback recovery to the player: it now retries automatically after decoder or media server errors on non-video content, switches radio stations between their HLS and AAC streams when a stream fails, and shows a loading indicator while buffering or switching streams.

2 · Open items

- MOB-894 Search for Moments: In Progress; going to Internal testing on Google Play.
- This week's work is on the feature branches and is not merged into develop yet.
- MOB-886 SoundStack Migration: assigned for next week; code is already on the working branch and still needs validation.

3 · Next week

- MOB-886: validate SoundStack on the stage build across stations: stream playback, pre-roll and mid-roll breaks, companion banners and metadata titles.
- Compare behavior with iOS (MOB-885) and resolve any differences.
- Follow up on Internal testing feedback for MOB-894.

4 · Open issues

- SoundStack audience targeting: the old AdsWizz parameters (sw_bp, gender, age group) are still added to the stream URL, but the SoundStack session discards them. SoundStack needs to confirm the equivalent.
